FAST MOVER: THE FLEXIBLE PARKDESIGNER®.

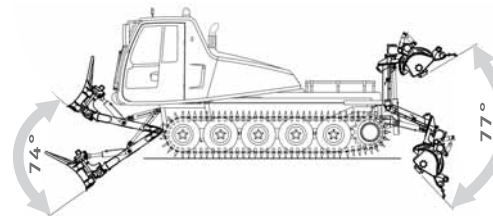

More power, more fun.

For boardercross courses to jumps, corners and halfpipes – PRINOTH now has a convincing machine for modern park-shaping operations. The new Everest Parkdesigner® is a particularly maneuverable groomer specifically designed for building and maintaining funparks and snowparks – quick, efficient and user-friendly.

Halfpipes, Jumps & Co.

Park shaping is an art in itself. Anyone who has worked with in-ground foundations, superpipes, halfpipes, rails and so on knows what demands such structures make of the groomer. It has to be highly maneuverable, and the blade and tiller need an outstanding working range to handle the tight radii and vertical curves. The Everest Parkdesigner® has the features and specifications to completely satisfy all of these requirements.

Everest Power®

Everest Parkdesigner®

Top results.

The new Everest Parkdesigner® has been redesigned with these challenges in mind. It is a highly flexible and nimble groomer with a much larger operating range in terms of height and depth than similar machines. The ideal tool for top results!

100% maneuverability and versatility.

This muscular machine has been completely redesigned from front to rear to provide a whole new standard of efficiency. The blade has a 25% larger range of movement and pivots through no less than 91°, while the extra-powerful tiller incorporates a 70% increase in vertical movement for an incredible 131 degrees working range. That gives the Everest Parkdesigner® its outstanding reach for greater excavation depths and impressive construction heights. This means 360° perfect snowparks and 100% fun!
